OVERVIEW

A visionary technical leader offering over 25 years of cross-disciplinary expertise spanning enterprise systems architecture, offensive cybersecurity, and intelligent automation. Proven track record of acting as a strategic technology advisor within high-stakes, mission-critical environments, directing up to \$20M in annual R&D portfolios and driving the technical vision for multi-billion-dollar enterprise initiatives. Experienced in modernizing and upgrading complex infrastructure, establishing robust risk and control postures, and spearheading the integration of cloud architectures, ML, and generative AI to deliver secure, high-throughput systems. Core Qualifications Aligned to the Role: : Directed enterprise-wide technical strategies and multi-year IT investment roadmaps (including \$14M to \$20M portfolios at the Missile Defense Agency). Specialized in upgrading complex environments, pioneering a "shift-left" security and automation process across 200+ active CI/CD software pipelines, and modernizing legacy infrastructures into automated, high-availability virtualized platforms. Modern Cloud Infrastructure (AWS): Provided Subject Matter Expertise (SME) on high-level enterprise ground architectures designed to leverage AWS cloud integration with secure on-premise DevSecOps software factories. Expert at bridging the gap between legacy environments and highly available, resilient cloud-native architectures. Generative AI & Intelligent Automation: Hands-on experience architecting and developing predictive analytics models on enterprise AI platforms utilizing Large Language Models (LLMs), TensorFlow, and Scikit-Learn. Researched emerging AI frameworks to drive intelligent pipeline automation, providing the baseline technical leadership required to implement scalable Agentic AI solutions. Real-Time, High-Throughput Systems: Experienced in architecting secure, real-time operational platforms, including enterprise Net Ops dashboards that aggregate and analyze real-time data from multiple external endpoints and directory services, demonstrating the capability to lead high-throughput, transactional data systems like fraud decisioning platforms. Robust Risk and Control Posture: Extensive background in software assurance, threat modeling, and defensive architecture. Conducted Cyber Resiliency Evaluations (CRE), Cyber Tabletops (CTT) , and deep-dive risk assessments to ensure compliance with stringent regulatory frameworks (including PCI, PII, SOX, and DFARS).

EXPERIENCE

Cyber Secure Software Sr. Manager 2025 - 2026 | LM Aero

Accomplishments: Senior Manager for the Cyber Secure Software team Supervised 22 staff, 2 managers and 2 development teams- Responsible for \$4M in annual spending - Responsible for direct staffing of senior architects and engineers delivering \$20M in annual R&D and contracted work deliverables for multiple LM Aero programs - Performed executive level briefing on cost and schedule - prepared detailed analysis and reports for program performance - Recruited and hired top talent to fill critical positions resulting in continued team growth- delivered exponential team growth (over %50 in some cases) by expanding contract presence and identifying new work opportunities.

Principal Cyber Architect (Software Assurance) 2023 - 2025 | LM Aero

Accomplishments: Lead Software Assurance activities within the Combat Systems department guiding two teams of Cyber Secure Software developers on all software assurances activities, training and mentoring staff - Worked with F-35 subcontract suppliers to set requirements and deliverable expectations - Proposal support for foreign military sales on multiple platforms - Performed independent research on new technologies and R&D proposals roughly \$20M in annual spending, guiding selection for projects and technologies.

Principal Cyber Architect 2020 - 2023 | LM Aero

Accomplishments: Principal architect Leading the application security strategy for F-35 Block Four Contract (BFC) proposal gaining \$44M in new work- Pioneered new application security process for shifting cyber left in 200 CI/CD software development pipelines- Developed CI/CD automation for SAST/DAST scanning- Trained and established new application security team for security testing and auditing CI/CD software pipelines for both LM developed code and FOSS - Developed FOSS malware analysis techniques to rapidly approve software for closed area networks and weapon systems minimizing time and accreditation impacts - Researched new technologies to enhance automation for CI/CD pipelines and more resilient software like C++ to RUST conversion and Formal Methods by partnering with DARPA and other organizations - Developed ML models to perform predictive analytics on software baselines using Tensorflow, Scikit Learn, LLMs and LM Aero's AI Factory platform - Researched many new technologies and frameworks in AI such as Pyspark, Snowflake and others - Team lead for Application Security team supervising 12 members providing daily tasking mentorship and career development.

Cyber Architect 2018 - 2020 | LM SSC

Accomplishments: Guided technical approach for Next Gen satellite based infra-red ground and space segment cybersecurity architecture with proposal and capture support for a contract value totaling roughly \$40 billion - Worked with multiple software development teams to develop engineering requirements and decomposition to testable acceptance criteria - Provided Subject Matter Expertise (SME) support on high level design for ground and software factory CI/CD infrastructure to leverage AWS where possible with integration in to hybrid cloud on premise software factory - Provided SME support for application security tools, process, and methodologies for a DevSecOps approach to mission unique and ground processing software development - Developed and delivered security training for threat modeling and secure software development - Performed Cyber Tabletops (CTT) and Cyber Resiliency Evaluation (CRE) assessments for critical designs and implementations - Provided SME support for zero trust Space vehicle bus architecture.

IA Engineer 2017 - 2018 | LM EBS

Accomplishments: Supported multiple BA customers for projects ranging from basic tiered web applications to third-party cloud provided SaaS solutions - Performed threat modeling and analysis to support Lockheed Martin Business Area (BA) Information Security Officer (ISO) risk assessment - Performed static code analysis using analysis tools like IBM AppScan, Fortify, Checkmars, and manual inspection using industry standards and best practices - Perform security engagements to ensure standards and policies are followed for new systems and configuration changes to existing systems and applications - Ensured security controls meet regulatory compliance such as PCI, PII / Privacy Shield, SOX, DFARS, etc. - Developed and/or reviewed architectural security designs to ensure compliance to standards and processes - Performed design assurance reviews for both internal and contracted Software as a Service (SAAS) to ensure LM global corporate network security and compliance.

Cyber Architect 2016 - 2017 | LM RMS

Accomplishments: Software Security expertise and consulting for multiple Business Area customers - Performed source code analysis using static analysis tool such as HP Fortify on multiple code bases across multiple programs (3D modeling/simulation C++ and C#, .Net web applications, PowerShell, Perl, VBScript, Python Java custom client/server applications and some J2EE applications) - Performed dynamic application testing with tools such as Burp Suite Pro to test application security controls - Provided software hardening guidance and solutions (written code) to developers across multiple programs - Analyzed application architecture to ensure software security controls meet compliance - Guided systems engineers on the technology selection, implementation and configuration of application platforms Supported new business capture teams as IA/Software Subject Matter Expert (SME) for multiple efforts including foreign military sales - Researched and developed new technologies for space and LM Aero systems Performed threat modeling and design assurance for key RMS, Space, and LM Aero

BA systems like GPS and Air Force Space satellite infra-red systems - Performed executive level briefing on new business opportunities.

Software Mgr 2015 - 2016 | MDA LM IS&GS

Accomplishments: Perform source code analysis using HP Fortify on multiple code bases across the agency for 3D modeling/simulation C++ and C# .Net web applications PowerShell Perl VBScript Python Java custom client-server applications and some J2EE applications - Provide software hardening guidance and solutions (written code) to developers across the JRDC program - Perform vulnerability and risk assessment of Commercial off the Shelf (COTS) software Supervised 10-12 staff across program - Responsible for \$1M in annual spending - Responsible for direct staffing of engineers, developers and architects delivering \$2M in annual R&D and contracted work deliverables for multiple MDA LM IS&GS programs - Performed executive level briefings on cost and schedule - prepared detailed analysis and reports for program performance - Recruited and hired top talent to fill critical positions for continued growth expanding contract presence and identify new work opportunities for Missile Defense Agency (MDA LM IS&GS) programs.

Lead Enterprise Architect 2014 - 2015 | MDA LM IS&GS

Accomplishments: Develop 3-year business plan for MDA LM IS&GS IT Services totaling ~14M in projects and technical refresh - Develop 5-year IT Vision document for MDA LM IS&GS IT Services providing direction for capital investments to meet the rising demands for MDA LM IS&GS multi-tenet IT support and investments in new technology to provide metrics and charge back capabilities - Partnered with operations managers, service owners, and architects to guide projects and integration - Supervised 10-15 direct reports across the Missile Defense Agency (MDA LM IS&GS) programs - Responsible for \$16M in annual spending - Responsible for direct staffing of senior architects and engineers delivering combined total \$20M in annual R&D and contracted work deliverables for multiple MDA LM IS&GS programs - Performed executive level briefing on cost and schedule - prepared detailed analysis and reports for program performance and new business opportunities - Recruited and hired top talent to fill critical positions for continued team growth by expanding contract presence and identify new work opportunities.

Software Engineer 2011 - 2014 | MDA LM IS&GS

Accomplishments: Lead software development activities for enterprise web applications - Perform full Software Development Life Cycle (SDLC) activities for the MDA LM IS&GS enterprise Support Commercial off the Shelf (COTS) applications for the MDA LM IS&GS enterprise, back up team lead as needed to ensure continuity of operations, -Develop Basis of Estimates (BOE) and technical approach for new contract work -Developed Net Ops

dashboard to integrate multiple operations crew input data into a common business logic layer to provide a single enterprise status dashboard. This application was built using .Net and MS SQL technologies. The application was written in C#, JQuery, HTML using the latest techniques to provide a feature rich user experience.

- Built a battle rhythm dashboard for IT Services which provides crew status on daily maintenance routines. This project was implemented using BMC Remedy web services integrated to a custom web application using .Net and MS SQL to deliver crew status.
- Replaced obsolete application for Missile Defense Agency (MDA LM IS&GS) Global Access List (GAL) Update page, this application aggregates multiple data sources including Defense Information Systems Agency (DISA) Enterprise Directory Services (EDS) data and the MDA LM IS&GS emergency alerting data into a single endpoint for users to update profile information
- Responded to DISA Security Technical Implementation Guide (STIG) for the use of token authentication for access to application services by leading the development of an automated registration web application which uses token information to validate access and auto provision domain accounts to grant seamless access with valid token credentials
- Developed data import application to migrate Missile Threat Portal (MTP) data from an Access database to SharePoint 2010 using SharePoint web services
- Built Active Directory tools using C# to perform multiple updates to agency user extension attributes with zero service interruptions
- Built multiple PowerShell tools/scripts with VMware CLI to perform maintenance operations on enterprise vCenter hosts supporting over 400 virtual servers

Developed .Net web application to read Common Access Card (CAC) certificate information and perform domain account creation to provide seamless access to enterprise applications

- Refactored legacy .Net web application code to meet modern Information Assurance (IA) code review requirements.
- Architected the Missile Integrated Secure Link (MISL) application utilizing SharePoint 2010 as the application front end with many custom developed web parts
- Developed PowerShell script to identify expired certificates and build custom report

Developed Active Directory sync code to perform user updates to the enterprise for Commercial off the Shelf (COTS) application.

Datacenter Engineer 2007 - 2011 | MDA LM IS&GS

Accomplishments: Design and develop datacenter solutions for the MDA LM IS&GS Enterprise network - Perform full Engineering Life Cycle activities for datacenter solutions Present requirements, architecture, and engineering artifacts before formal review board to obtain incremental approval to proceed Lead Engineer for physical to virtual machine conversion for 80% of MDA LM IS&GS servers Enterprise wide. - Performed SAN switch upgrade for SAN standardization Build multiple VBScript and PowerShell scripts to automate server provisioning and virtual machine maintenance Implemented HP's Flex 10 Ethernet and Fiber channel virtual connect to support VM Infrastructure enterprise wide, developing configuration scripts for automated remote SAN and network provisioning within server chassis infrastructure. - Designed MDA LM IS&GS enterprise SharePoint solution to provide full DRCOOP backup capability Implemented VMware's Site Recovery Manager to provide warm site fail-over capability for Tier 1 applications Developed script to allow remote login for video teleconferencing service account schedule task to transfer data to shared storage for web portal.

Associate Engineer 2002 - 2007 | SI International

Accomplishments: Performed engineering and systems integration for secure voice and data communications. Customers included Air Force Space Command (AFSPC), Missile Defense Agency, Defense Information Systems Agency (DISA), and other Department of Defense (DoD) Agencies. - Developed Java application to support text based switch data and provide a graphical data representation of secure switch data. Research and development for network capabilities for CISCO and Juniper Circuit to Packet technology.

EDUCATION & CREDENTIALS

Master of Science Software Engineering 2018

Bachelor of Science Computer Networking 2008

Associate Applied Science of Electronics Systems Technology 2002

CISSP #564456 2015

Security+ Professional 2008
